

# Using Medical Objects: Installing Trinity

## Please note...

This needs to be installed on each computer from which GPs wish to send referrals.

- 1) Firstly, you need to download the program from: <http://download.medical-objects.com.au/>  
Look for the one called **Medical-Objects Referral Client (Trinity)** and click on *Referral Setup (Bleeding Edge)*.

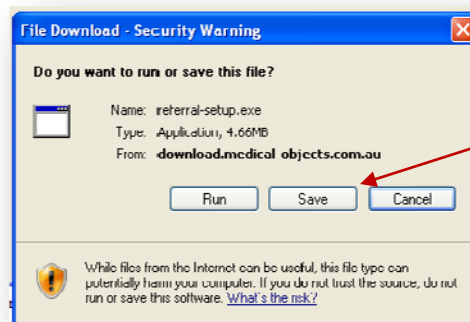

**Medical-Objects Referral Client (Trinity)** is a free lightweight client for GPs that enables doctors with an Individual PKI Token from [Medicare Australia](#) to send legal, electronic referrals to any doctor that is set up to receive messages through Medical-Objects.

- 2) Next, click **Save**. Once downloaded, run the program.  
Note that if you have several computers to install Trinity on, it is recommended that you save this file on your server or a USB stick.

- 3) Once the install window appears, follow the *prompts and click Next, Next then Install*, leaving the install path as C:\MO\Referral.

Finally, click **Finish** to complete the install.

Trinity will start automatically and you can send a test message to make sure it works.
